WHO ARE WE?

SHORT STORY

The beginnings of Torro sp. z o.o. date back to 1997. The company was established by Jacek Domański and Dariusz Skoczeń. They are the only shareholders to date.

The production plant covering an area of about 2,000 m² is located in Puchały near Warsaw at the junction of motorways and expressways, which guarantees fast delivery of our products to customers all over Poland and abroad.

WHO ARE WE?

SHORT STORY

Currently, the plant employs about 60 people. Most of the managerial positions are held by graduates of universities and printing schools, who are a guarantee of proper workmanship and high quality of products offered by the Company.

WHAT DO WE DO?

STRENGTHS

Our printing plant has been providing the highest quality services in the field of print preparation and binding of works for 20 years. Our production is characterized by highly processed works carried out in the UV offset printing technique.

We have a wide experience in printing and further processing of non-absorbent materials such as Pet, Pvc and cardboard covered with metallic foils, the end result of which is, among others, packaging for the pharmaceutical or cosmetic industry. As one of the few in Europe we offer the opportunity to carry out work in the Waterless ecological technology.

WHAT DO WE DO?

STRENGTHS

One of our specialisations is the printing of "water colouring books" made with the Waterless technology. Torro is a member of the WaterLess Printing Association - an association of producers who show concern for the environmental protection and state of the environment, we have the right to place its logo on products made with this technology. The whole production cycle guarantees a child-safe product, starting with certified paints and ending with safe staples used in bookbinding.

Our "colouring books" have recipients in countries like: Poland, Lithuania, Czech Republic, Hungary, England, the Netherlands, Italy.

MACHINE PARK

We offer high quality offset and UV offset printing on 6 and 5-colour machines with a coater press. Komori Lithrone GL-629: 6-colour printing with two UV coater presses or dispersion and a drying unit, a machine equipped with automatic systems for correcting ink limit and dot gain.

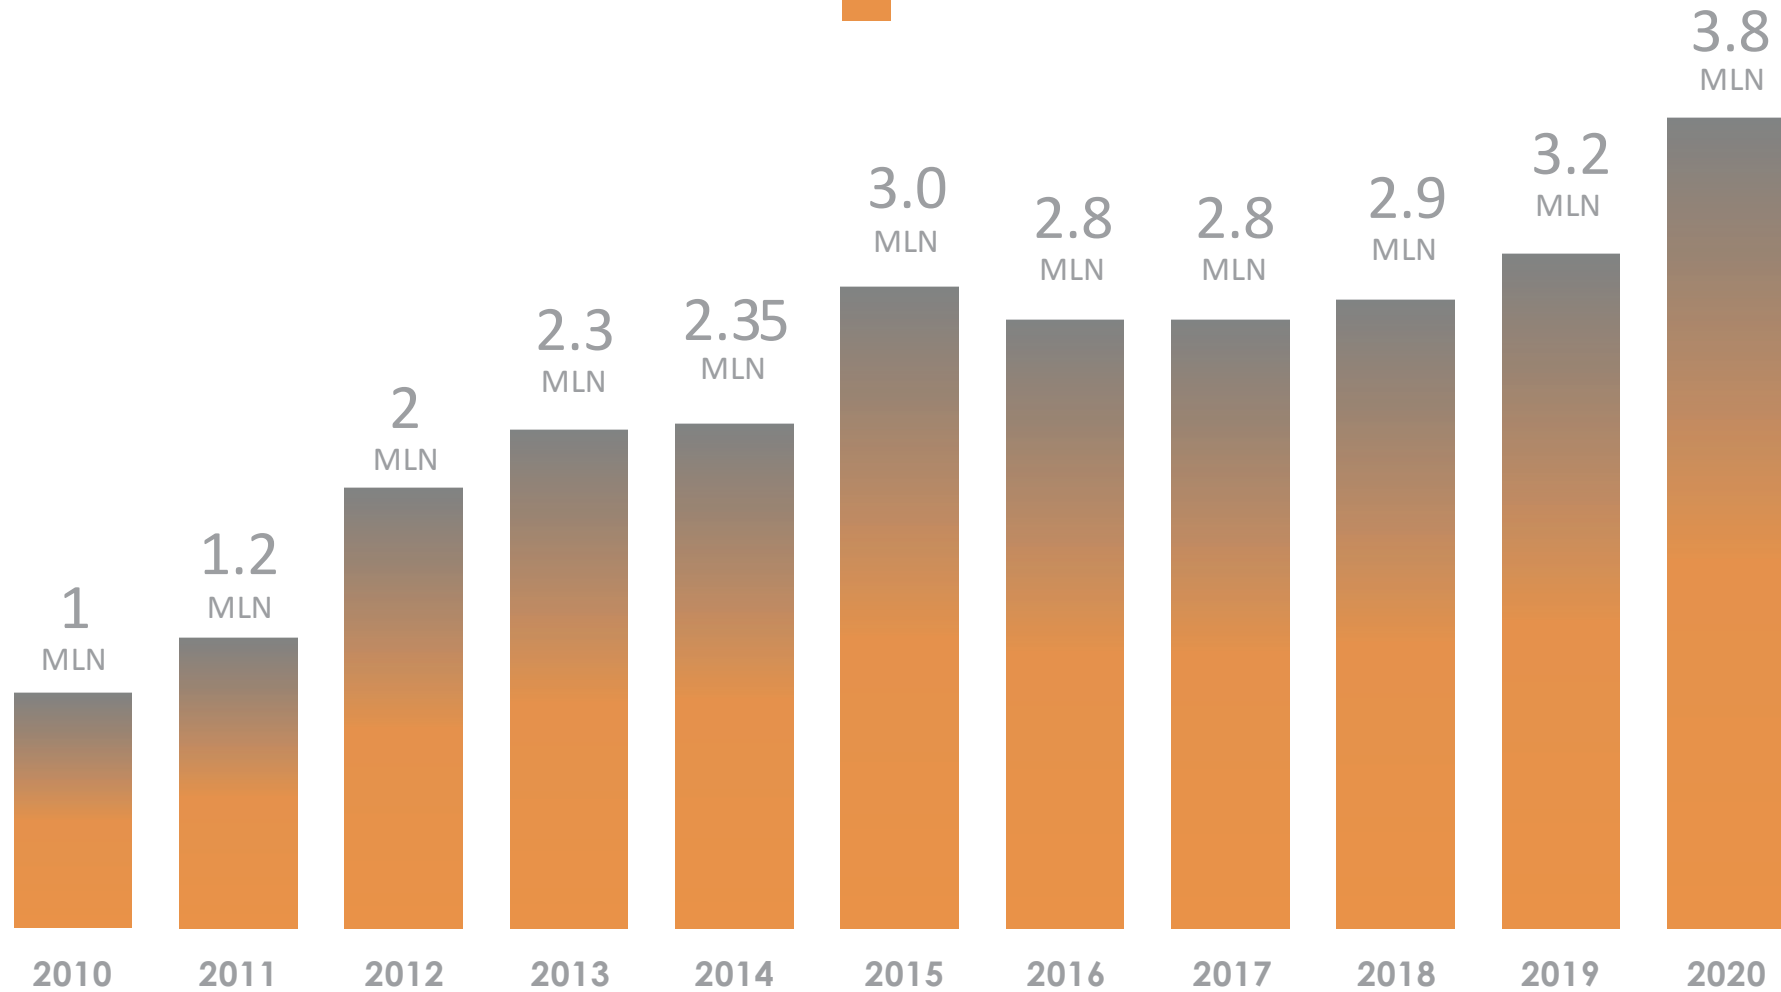

Komori Lithrone L529: 5-colour + UV and Waterless printing with the possibility of selective UV ON-LINE varnishing on the printing machine, refined with heavy varnishes containing fillings, including mica and pearl varnishes. Most of the finishing processes are carried out on our own, which minimizes the possibility of errors in the final stage of production.

WE PERFORM

- Wire stitch binding (regular and euro staples, including "child safe" staples) - Hohner HSB 8000 - 6 stations
- Soft glued binding – BQ 260 Horizon spiral binding
- 3-point gluing of boxes on the Versor line with cold adhesive and PUR
- die-cutting on Heidelberg Cylinder and SBL machines with heated plate and system for PVC, PET
- PVC,PP,PET- mats and primers, hot foiling blisters
- cutting – Perfecta 115, 92 machines
- folding (also gate), booklet bonding directly with use of the folder
- Selective UV: refining also with glitter varnishes and foils that do not show any fingerprints on the finished product, e.g. black one.
