AB Andolšek Aleš CNC-inženiring s. p.

Precize milling
on
**3- and 5-axis
simultaneous CNC
machining centres.**

HAAS UMC750 SS
HAAS VF2
HAAS VF2 SS

We specialize in CNC processing of
small to medium series (1 – app. 5000 pieces),
dimensions of flat workpieces can be up to 860 x 500 mm.

Since the **quality** of products begins with the selection of **most suitable** and **high-quality material** we advise and choose wisely.

We are working with **wide range of materials.**

But **70 %** of our products consist from **aluminium alloys** and **plastic** that is why we ensure you that we excel in the production of those.

This comes into play when certain product must have their own characteristics.

For aluminium components those are hardness, resistance to heat, wear, good anodization or painting and for plastic components hardness, resistance to heat, wear, greasiness, not to be conductive or anti-static...

Our focus is on **quality** manufactured and **quick delivery times** while keeping a **competitive pricing level.**

Specialized in smaller productions has its own advantages. We can **individually devote ourselves** to our partners.

We support you by:

- before production, we review the technical documentation and implement possible changes,
- we have a larger amount of material in stock which guarantees us an **immediate start of production** and quick delivery of a new spare part,
- all products are inspected, deburred and hand polished before release.
