## FSL-ECO S

# BIZERBA

*Filling system FSL-ECO S is the optimal entry level model for small companies who want to fill high-quality, uncritical and non-flammable liquids. With automatic filling as accurate as 1 gram this practical system lets you save time and money.*

**More information**  
High performance  
with a wide range of  
solutions and options.

### Product description

FSL-ECO S offers particular advantages for companies where filling of liquid products is a firm part but not the main task in their production process. This system is the first step from manual to automatic filling. The semi-automatic system safely and reliably fills all common containers such as canisters, pails, drums or IBCs.

Products are handled manually and the automatic filling provides to-the-gram results. You avoid over or underfilling and save valuable time. The various manual closing systems prevent the containers from leaking. FSL-ECO S ensures smooth processes.

Our options allow you to expand your system individually and adjust it to your requirements. Interchangeable filling valves, for example, ensure a hygienically perfect product change.

FSL-ECO S canister

### Highlights

- From consulting to financing and service: Everything from a single source
- All technical components come from Bizerba Busch: Scale, terminal and filling system
- High quality at a reasonable price
- Individually adjustable to your needs
