

BAGS-ON-A-ROLL

Pre-opened on one side, with tear-off perforation

Our bags-on-a-roll are filled semi- or fully automatically and can be printed with a thermo transfer plotter.

The bags are opened manually or automatically by air blast and they are filled while still hanging on the roll.

A vertical tear-off perforation helps your customer to re-open the filled bag.

Holes can be punched in the bags, allowing air to escape during the packing process. The back of the bag can be coloured for better visibility of the bag's content.

Lateral cardboard disks ensure the steady and exact unwinding of the roll.

APPLICATIONS:

- Automotive
- Electronics
- Metal hardware
- Medical and health care devices
- Plumbing parts
- Household products
- Toys

PRODUCT BENEFITS:

- easy handling
- stable packing process
- flexoprintable with up to 10 colours
- highly transparent film
- one side (or both) can be coloured
- excellent price-performance-ratio
