## RIK - RetailIntegratorsKit

**BIZERBA**

***RetailIntegratorsKit (RIK) brings together what belongs together: This platform enables you to integrate your software on Bizerba PC scales. Experience the change at the POS as a result of the combination of a checkout scale and cash register software on a PC scale – thanks to RIK. This offers you a lot of scope for customized industry solutions.***

**More information**  
High performance with a wide range of solutions and options.

### The route towards an open retail world

RetailIntegratorsKit (RIK) offers a powerful platform to integrate software in Bizerba PC scales. Regardless of whether it is industry solutions with or without scale applications or special customer software. RIK provides all the functions needed to configure, calibrate or test hardware components such as scales, printers or displays. When integrating his software, the RIK partner can build upon a fully run-capable and approved scale solution. Already in the standard version this platform offers metrologically approved display windows for customer and operator displays with different display versions. Moreover, functions to retrieve all metrology parameters via the scale display, tare or set the scale to zero are also provided. The provision of scale functions, labels or receipt printing is based on the ARTS standard UPOS 1.14 which is valid worldwide.

RIK is more than a software – RIK is a complete solution which guides you through your projects.

- Developer support during integration
- Support during approval process
- Roll-out planning
- Installation of the partner software during scale production
- Direct delivery to the customer

### RIK business model

#### Products

#### Services / Support

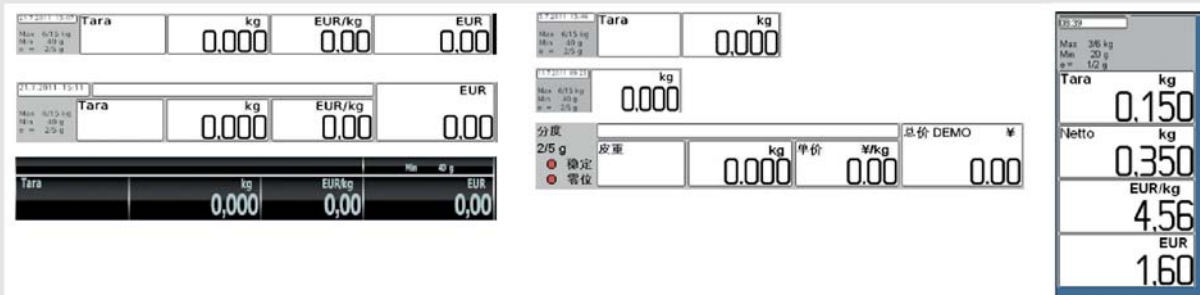

### Impressive USPs

Standardized ARTS UPOS 1.14 interfaces for scale, printer and cash register drawer

- Interface available for PC scales and checkout scales
- Layout-based label print based on \_bld.BRAIN
- Solution for Windows and Linux
- Simplified approval due to connection to Welmec certified Bizerba scale components
- Integrated test tools to check display, touch, cash register drawer, printer and scale
- Integrated code generator generates sample code
- Our experts support you in the integration and approval process
- Customer-specific development
- RIK fulfils requirements for software downloads according to Welmec 2.3. The partner software also covers these requirements through an authentication procedure. This also permits scale applications, such as price labeling or self-service functions. RIK simplifies software updates of the partner software which is subject to metrological approval thus eliminating the need of specifying the metrological software version on the type plate.

## Examples for scale displays

### Evident product value for the use at the Point of Service

The integration of the industry or customer-specific POS software on the compact multifunctional device provides numerous advantages:

- It saves valuable space on the counter or at the POS
- Less operator training
- Simplified processes
- Allows the expansion of the POS software's range of functions

### New and extended functions

- Support of true type fonts
- Graduated price calculation
- QR code printing
