

## DOUBLE BOTTOM BLOCK-MOULDS

The double bottom system and the perforation ensure both safe moulding and draining with the possibility of stacking mould on mould.

The moulds can be used individually or assembled into block-moulds.

### APPLICATION

Moulding and draining of soft cheeses

### MATERIALS

- Injected parts made of food grade polypropylene
- Available in X-ray detectable material

### DIMENSIONS

Various sizes available

Safe whey evacuation  
Optimised drainage and ventilation

Possibility of turning in stack  
Space saving in the workshop  
Optimisation of heat exchange

Cleanability foreseen from the design phase  
No retention and all surfaces are accessible for cleaning

Recyclable plastic materials, controlled recycling circuits  
Possibility to take back moulds and block-moulds at the end of their life  
Reduced environmental footprint
