Functionalities

The stitching module is a high-performance alternative to OEM's solutions. This module can be integrated into manufacturers' solutions.

It works with all CR or DR. The module is simple to use, it allows to acquire a high-quality image and easily usable for precise measurements.

This technique allows to build an image from 2 to 6 acquired images, for the spine or lower limbs.

Different viewing modes are possible to improve image quality and speed of execution.

This module can be configured according to user's needs.

Dedicated measurement tools
