ABOUT WHITES

Inspired by the whiteness that surrounds you during sleep, the Whites Collection offers a restful sleep while also ensuring that you will not compromise your health!

Given that one third of human life is spent sleeping, it would be safe to say that the products providing comfort in bed are directly related to your mental and physical health. Quality sleep profoundly affects your productivity during the day, which also reflects on your hormonal levels and mood. In addition to offering basic sleep products that directly affect your quality of life, the Whites Collection has combined comfort with solutions specific to personal health with the Espira quality.

We are confident that the Whites Collection will exceed your expectations and provide peaceful sleep, as a result of the studies and research we've been conducting since 2006.

There is a right option for everyone among the sleep elements prepared by experts, which you can choose by combining many variables such as your allergies, the geography and air conditioning status of your home.

WOOL

Wool, one of the most frequently used heat-regulating materials for a sound sleep experience, is resistant to cold and heat.

Thanks to their durable fiber structure, wool pillows and comforters can be used for many years, absorbing and evaporating excess moisture in the environment, which provides you with a comfortable sleeping environment.

With an ability to absorb moisture up to 33% of its own dry weight, wool helps with heating in cold weather and cooling in hot weather. As such, you can use wool pillows and comforters for four seasons.

COTTON

A return to traditional methods for comfortable sleep... Cotton will take you back to your childhood with its soft and full structure, as it distributes heat evenly by releasing air during sleep and protects your body against changes in temperature.

Cotton fully maintains its thermal insulation properties even when it's wet, and adapts to changing temperatures during sleep thanks to its breathability. Cotton is a 100% natural material suitable for use across all four seasons.

BAMBOO

Bamboo is the choice of those who care about their health.

If you are looking for a breathable, odor- and bacteria-free comforter or pillow, a mixture of nanofibers and bamboo would be the right filler for you.

Bamboo, used as raw material for natural yarns, absorbs moisture very well and helps the body breathe by providing air permeability.

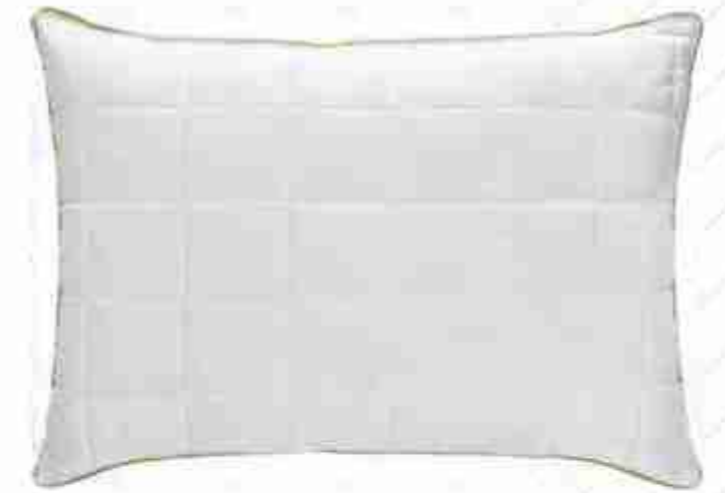

Being a natural cellulose fiber, bamboo is extremely soft and lightweight. Bamboo is grown without the need for chemical pesticides or fertilizers, and is 100% natural.

TENCEL

Cutting-edge technology in comfort: Tencel.

Australian eucalyptus fiber made of lyocell wood is a natural material with antibacterial properties.

Tencel is an innovative material, a silky fiber manufactured by nanotechnology from the high-quality wood of the Australian Eucalyptus. Tencel is a type of regenerated cellulose fiber that is highly resistant to intense mechanical processes. It combines the softness, soft coolness and smoothness of silk with the strength, homogeneity and comfort of natural cotton.

High modulus and durability means that the Tencel fiber will not be easily deformed in the fabric, and will regain its original shape and volume more easily, lasting for many years.

Feels so right

A photograph of a green Aloe Vera plant in a light-colored, rounded rectangular pot. A large, white, glowing circular graphic is superimposed over the plant, partially obscuring it. The background is a plain, light gray wall.

ALOE VERA

Aloe Vera has been a part of human life for centuries thanks to its soothing, antibacterial and healing effect, and now, it's in your bed.

During sleep, the fabric containing Aloe Vera extract will support the moisture your skin needs, preventing skin irritation or allergies. Pillows and comforters with 100% microfiber cases and a breathable structure that contain Aloe Vera, balance the heat in your body and sleep environment. Designed to increase your sleep and skin quality, this very feature makes Aloe Vera suitable for use throughout the four seasons.

CLIMATE

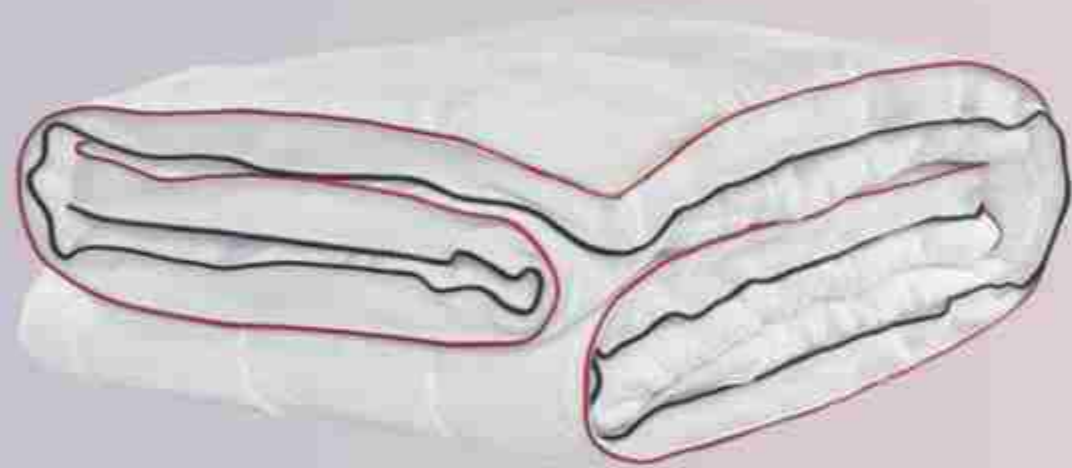

The climate effect is an air control system discovered in sleep research, an ideal synthesis of nature and scientific studies. Under normal conditions, rising body temperature causes sweating during sleep. As a result, as humidity increases gradually, the temperature continues to increase in parallel with the increase in humidity.

The holes in the air control line of Climate keep the temperature and humidity in the sleeping environment at an optimum level. As the moisture is drawn away from the bed, evaporating out of the air control holes as the air warms up and rises, cold air is prevented from entering by means of a double-channel ventilation unit. It provides an air conditioning system that creates temperature and climate balance, especially for those who sweat during sleep.

Softness protects your body against changes in temperature, and adjusts the humidity level inside your mattress.

SWAN

ALTER

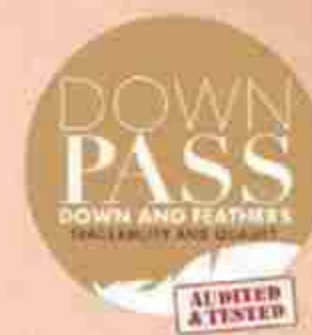

FEATHER

GOOSE DOWNS

Goose down, one of the fibers with the highest heating capacity, keeps the heat more than other filler materials and ensures the preservation of body temperature even at low temperatures, while creating a cozy and comfortable sleeping environment thanks to its light and thin structure.

The goose down inside the pillows and comforters comprises of jowl and back feathers, and the more jowl feather there is, the softer and warmer it is.

MEDICAL ORTHOPEDIC

Medical Orthopedic Pillow: The choice of those who are sensitive about pillows.

Covered with 100% cotton fabric, the Medical Orthopedic Pillow is a soft support pillow with a special form. Its compartmentalized structure with different-density fillers in each compartment adapts to different comfort and usage needs.

Its bellow-shaped design helps to reduce neck pain by supporting the head and neck area.

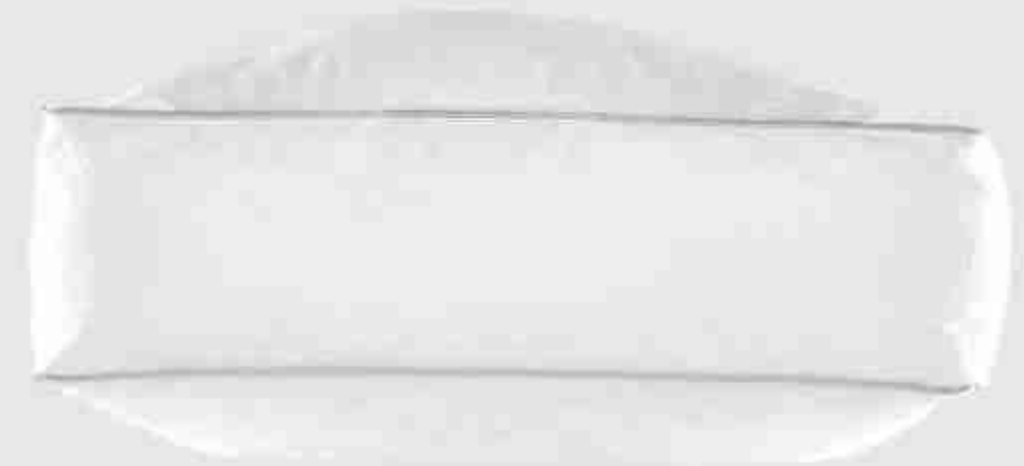

The Medical Orthopedic Pillow, which is hard on one side and soft on the other, is suitable for double-sided use.

"How come do pillows have technology?"
Wonder no more! Visco Orthopedic Pillow is curved in a way that will integrate with your anatomical structure. It provides a comfortable and unique sleep experience with the technology it has developed, even for those who have difficulty going to sleep. With its cottony and soft surface, your skin will continue to breathe while you sleep comfortably; and when you wake up, you will start a new day in every sense.

VISCO AIRCOMFORT PILLOW

You will feel your pillow breathe!

The holes in the Aircomfort Pillow provide extra softness and help circulate the air flow in a comfortable loop. Aircomfort also prevents any breathing issues that result from sleeping in the wrong position, and will help prepare you for a vigorous day.
