

moldclean

Cleaning and protection of cooling channels

Efficient cleaning of polluted circuits – Reduction of cooling time

moldclean – Cleaning of heat conducting in cooling and temperature control circuits

Reduce cycle time

Minimize reject rates

Increase productivity

Lower maintenance costs

The **moldclean** series was designed to clean scaled cooling channels of injection moulds and heat exchanger systems. The ph-value control and the flow rate measurement indicate the progress of the cleaning process.

Regular maintenance sustains long-lasting productivity

Minerals that are dissolved in the circulation water separate and solidify on heat conducting surfaces, obstruct heat transmission, create hot spots and prolong cycle times. Oxygen and carbonic acid are released and lead to corrosion, which, in turn, causes further downtimes. Additional maintenance, unstable processes and downtimes incur major costs, which can only be prevented if the surfaces are kept clean.

Depending upon the grade of contamination the cleaning of the cooling channels results in a cooling time reduction of up to 40 % and even more.

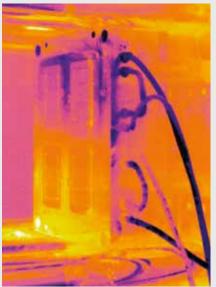

As a system supplier, **gwk** has been offering cleaning of components that have conducted water for a long time. The latest development, easy to use by the processor himself, is **moldclean**, a compact appliance which cleans polluted cooling channels in injection moulds and heat exchanger systems.

Maintenance support

The state-of-the-art cleaning units of the **moldclean** series can be very effective as they carry out the cleaning process virtually automatically and reduce the employees' workload. The expenses for the regular cleaning are relatively low in comparison to the regained productivity and the obtained process reliability.

System cleaning

Polluted cooling channels increase the temperature of the mould wall and thus reduce the quality of the moulded part while at the same time cooling time is increased. The loss of production in the presented example was 1,600 machine hours per year. This amounted to 48,000 EUR. Cleaning costs were amortized after a few days.

Inhomogeneous temperature distribution in the injection mould due to polluted temperature conditioning circuits.

Homogenous temperature distribution in the injection mould after the temperature conditioning circuits have been cleaned.

DWK Perfect Cooling and Temperature Control

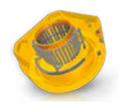

Increased productivity

In many areas of the industry, cooling and temperature control provides a great potential for increasing productivity and thus for lowering costs.

Many factors serve to improve productivity:

- Reduction of cooling time, therefore savings in required machine hours
- · Improvement of product quality
- · Increasing availability of production plants
- Decreasing running cost
- · Reduction of maintenance cost

gwk integrat 4D

Optimal product quality through homogeneous temperature distribution by temperarture control with close-to-cavity mould inserts.

gwk HSW

Cost reduction by means of advanced heat recovery systems.

gwk system integrat

Increase of productivity by means of specific and segmented mould temperature control.

gwk hermeticool hybrid

Innovative cooling system to decrease the running and maintenance cost in comparison to conventional cooling systems.

gwk teco c

The compact series with excellent price-performance ratio for the demanding plastics processor.

gwk container-plants

Highest flexibility and lowest expenses for planning, installation and relocation of a centralised cooling plant.

gwk teco wi / wd

Effective temperature control of applications with high material throughput. Also ideal for pre-heating of large injection moulds.

gwk ku-plants

The simplest and cheapest solution to increase the availability and to decrease the maintenance cost of open cooling systems.

gwk weco

Controllable production in variable climatic conditions and high flexibility with compact, energy-saving water chillers using environmentally friendly refrigerant.

gwk service

Decreasing the maintenance cost and protection of company owned resources through professional execution of installation and maintenance works incl. cooling water treatment.
