Aluminium solutions

# Aluminium solutions made by experts

Aluminium has a broad range of unique properties that contribute to building a new society based on low carbon products, lighter cars, energy efficient-buildings and recycling. Today, aluminium is the second most widely used metal in the world due to its unique combination of attractive properties such as low weight, high strength, excellent corrosion resistance and easy machining. Aluminium develops a natural oxide layer, protecting it against corrosion and making it virtually maintenance free. This makes aluminium the ideal material for packaging, building, vehicles and transport. Despite its relatively low weight, aluminium has a remarkable strength to weight ratio. As an alloy, aluminium offers similar performance to advanced steels and titanium.

Aluminium's unique properties allow for significant energy savings in many applications; for example, in vehicles and buildings. In addition, recycled aluminium is highly energy efficient, using only 5% of the energy of primary production. That is why we truly believe that aluminium is the metal of the future.

At Realit, we strive to deliver aluminium solutions that not only satisfy, but also surpass customers' expectations. Thus the most innovative approaches are utilised to bring the most innovative products to the market.

# Your reliable partner

**Realit was founded in 2001** and since then the company has grown to one of the indisputable leaders of aluminium extrusion market in Russia. We operate both locally and globally, bringing our expertise and competence in producing extruded aluminium profiles to our customers.

Using cutting edge technology and with almost 20 years of experience in extruded aluminium solutions, we constantly work to satisfy our customers' demands to the very fullest. We produce high-quality extrusion billets, profiles and aluminium architectural system as we ensure thorough quality control on every production stage starting from smelting and extruding to cutting and coating. The production facilities are located in Ochninsk, Russia, which enables fast delivery of our products to all our European partners just in time. We use our expertise to find the best possible solution for you, every time.

Being a truly customer-oriented company, we offer a wide range of various services, such as design, manufacturing, fabrication, surface treatment and finishing. We invite you to use our expertise, as early as possible, in your new product development process. We understand the capabilities of the extrusion process and together we can achieve outstanding results.

By consistently improving our production processes, we fully comply with the high technical and quality requirements of our international customers. We currently hold over 5000 dies for our customers, but if you require a unique solution, our experienced team of engineers will design a brand-new extrusion **specifically for you**.

# All under one roof

It all starts in our casthouse where we smelt aluminium ingots into extrusion billets. Once the metal has been smelted and its chemical composition adjusted, it is cast into billet shapes in the casting machine. The billets then undergo homogenization treatment, followed by controlled cooling. Lastly, the billets are cut to the desired measurement and prepared for shipping. We operate modern casting facilities that produce a wide range of high-quality aluminium alloys billets which are engineered to meet specific design requirements. Our billets are produced using state-of-art casting technology and are ultrasound inspected and homogenized before delivery. We produce extrusion billets in various alloys, including **1050, 6060, 6063, 6082**, and diameters **127mm, 152mm, 178mm, 203mm**.

In our production facilities, we have 3 extrusion presses (Presezzi Extrusion S.R.L.) with various extrusion forces — **1250, 1800 and 2800**. This variety allows our customers maximum flexibility. All 3 presses are equipped with state-of-art liquid nitrogen die cooling systems, which improve production rates, surface finish and die life.

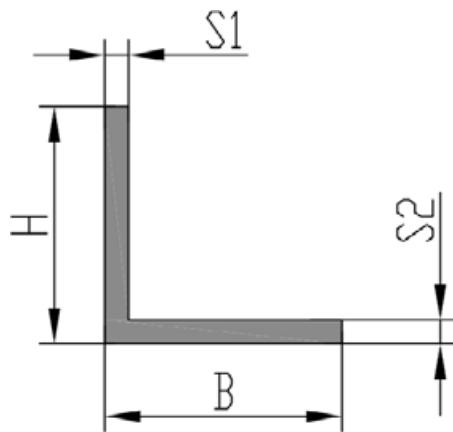

In addition to that, thermal break assembly line, anodising and Trasmetal vertical and horizontal powder coating lines are also available. Our standard extrusion alloys are the following: **6063, 6060, 6082 and 1050A**, though other alloys are available at request.

If you don't see what you want within these pages, give us a call — our range of standard profiles is continually expanding!

# Our possibilities

This illustration shows max. dimensions of extrusions manufactured by our company. Upon request, we can consider the fabrication of profiles with other dimensions as we continuously develop our production processes and invest in new equipment.

Manufacturing Company «REALIT» LLC

Kievskoe shosse, 57, Ochninsk,  
Kaluga region, Russia
