

Plugtite Nozzle Adaptor

Our latest tool for use during the maintenance of hydraulic and other industrial equipment.

Plugtite have developed a range of adaptors for use with air-guns whilst servicing and maintaining hydraulic and industrial equipment

MADE FROM A SPECIAL COMPOUND IN OUR OWN FACTORY

In addition to our range of industrial plugs we have developed a range of nozzle adaptors to be used during maintenance of hydraulic lines and channels.

- ✓ SMALL KIT - xx Nozzle Adaptors (Ø 5.8 - 30.2 mm)
- ✓ LARGE KIT - xx Nozzle Adaptors (Ø 14 - 46 mm)
- ✓ MIXED KIT - x small adaptors x large adaptors plus x small plugs x medium plug and x large plugs

By using the nozzle adaptor in conjunction with an air gun it prevents splash-back of any oils, chemicals, liquids, or other debris from the channel /tube/pipe whilst cleaning under high pressure, thereby protecting both the user and the environment in and around the equipment from contamination, and, at the same time ensures that all the air pressure is directed into the channel ensuring a stronger pressure for improved performance.

- ⚠ For use with air-guns only
- ⚠ Use in short bursts
- ⚠ Always wear eye and ear protectors
- ⚠ Not for use on blank end pipes channels or tubes

OTHER MEMBERS OF THE PLUGTITE FAMILY

Plugtite Industrial

For use in the service/maintenance of industrial machinery such as hydraulic/chemical lines and Industrial. More detailed information is available on our Plugtite Industrial product sheet.

Plugtite Heat Resistant

For use in operations such as **Electrostatic lines**, die casting etc. where high **heat resistance** is a requirement.

Plugtite Hygiene

This plug is specifically produced for **use in the food and beverage processing industry.**
