Multi-function touch area

Wearing Diagram

Product Diagram

Charging box

Charging: blue breathing light flashing Full power: the blue light is always on (when the power is full, the type light is always on when it is inserted, and the type light is off when it is pulled out)
Low power: red light flashing
When charging the headset, Put in the left earphone, the left blue running light indicates (3 dynamic), full off Put in the right earphone, the right blue running light indicator (3 dynamic), full off

Headset

1. Turn on, the red and blue lights flash alternately
2. Turn off the power, the red light will be on for one second and then go out
3. Charging, red light breathing rhythm status indicator
4. Fully charged, the light is off
5. TWS pairing mode, red and blue lights are on at the same time
6. Connect the mobile phone and the light goes out
7. TWS pairing is complete, one of the host's red and blue lights flashes alternately, and the other light is off (flashing once every 5 seconds)
8. Low battery, red light flashes quickly and accompanied by low battery warning sound

Charging Case Manual

Equipped with a 300MAH charging case, which can charge the earphone at least about 3 times and meet the requirement of listening for a long time. While charging, the red LED lights of both left and right earphones flash, and the red lights will turn off after charged.

Instructions for Binaural Effects:

Earphones connect automatically after taking out
1. Take the earphones out of the package, tear off the blue insulating sticker, and put them into the charging case for activation (or press 3 seconds to activate).
2. When the earphone is turned on, the red and blue light of the left and right ear will flash alternately, and the earphones will connect automatically (the paired state is that one earphone flashes red light and blue light alternately). If both earphones are flashing, representing that the left and right ears are not paired successfully, for which requires manual pairing (Flashing once every 5 seconds).
3. Turn on the bluetooth on the mobile phone, and search for ME-28 bluetooth device and click connection. When it connect succeeds, there will be a voice prompt to remind the successful of connection.

Manual pairing method: turn off the bluetooth of the mobile phone, turn off the left and right earphones. Then turn on the left and right ears, and double-click the left and right earphones respectively to enter the two pairing mode—the red and blue lights of the left and right earphones are on at the same time. After that, the headset will be automatically paired, and the waiting time for pairing is about 2-15 seconds. After the pairing is complete, only one of the earphones' red and blue lights flashes alternately, and the other one turns from the red and blue lights on to off (Flashing once every 5 seconds). After the pairing is completed, you can connect to the mobile phone for use.

Power Off

Touch the left and right earphones, touch the area for 6 seconds, the red light is on for one second, and turn off the machine. Put it directly into the charging box When the cover is closed, the headset is powered off. (The earphones will also power off automatically after 5-minutes under disconnected situation)

Common Problems

- **Bluetooth device cannot be searched by mobile phone**
Clear all the Bluetooth pairing data stored in the phone, and then turn on the bluetooth on your phone again and search the device.
- **Only one earphone has sound?**
 - ① Check whether the two earphones have power
 - ② Check whether the two earphones are turned on
 - ③ Check whether the two earphones are paired successfully
 - ④ Reset using manual pairing method
- **The earphone is stuck or disconnected while talking or listening to music**
 - ① The earphone lacks of power
 - ② The distance between the mobile phone and the Bluetooth earphone is more than 10 meters
 - ③ There is a large signal blocking object between the mobile phone and the Bluetooth earphone, such as wall.
 - ④ The pairing of the left and right earphone is not synchronized. Under such circumstances, it is recommended to repair the left and right earphone after powering off.
- **The sound quality of the Bluetooth headset is not ideal?**
The new earphones need a warming process, for which it is recommended to play music step by step, and after a certain time, the sound quality of each audio section of the earphones will be improved accordingly.
