

Drum Heaters from Freek

HSSD - drum heating band (max 120 °C)

These drum heating bands can be used for heating standard drums or other drums made of metal. They are secured by a hook and spring fixing and thermostatically controlled.

HISD - insulated heating jackets (max 90 °C)

The insulated heating jackets are not only used for drums made of plastic or metal but also for curing GRP. They can be manufactured with any number of buckles and straps and are supplied with an adjustable thermostat as standard.

HTSD - insulated heating jackets (max 220 °C)

The high-temperature version of the insulated heating jacket can also be manufactured in various sizes both bespoke and to suit standard drum dimensions. Buckles and straps are used for fitting and a high temperature thermostat is fitted for control.
