Metal Bellows Coupling with Intermediate Pipe I WDE

- cost-effective version with reduced operational parameters
- variable length up to 3 m - simple installation - split-hub design
- backlash-free, precise torque transfer - no additional intermediate bearing

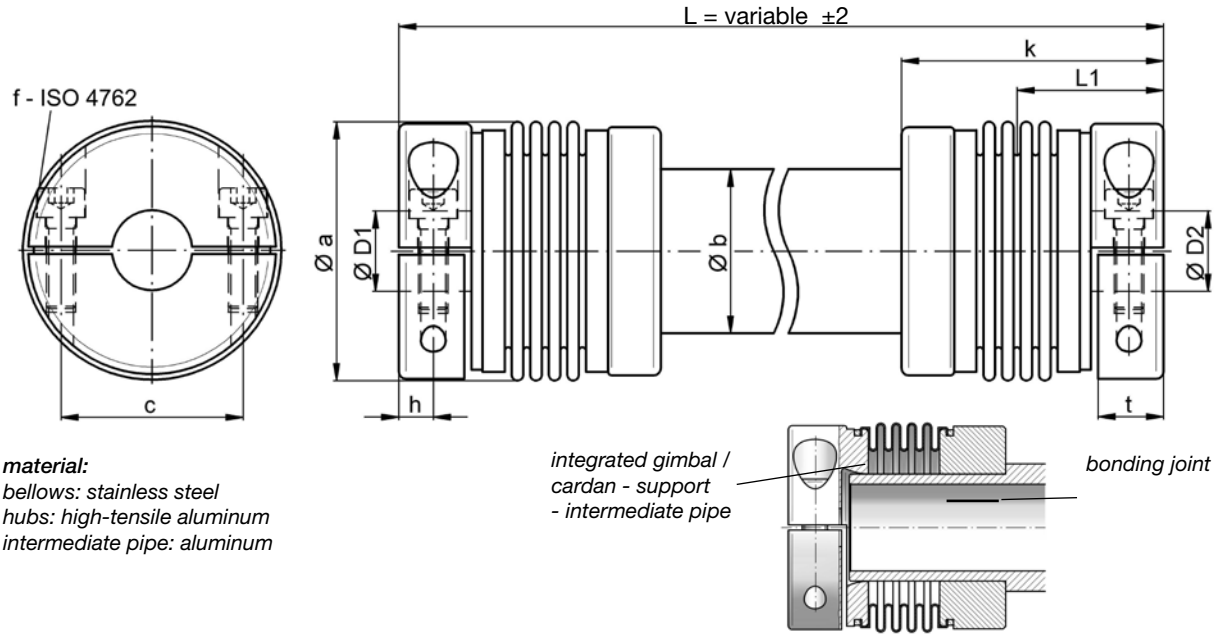
maximum temperature range: -40°C up to +90°C

maximum axial shaft misalignment: $\Delta A = \pm 1{,}5$ mm | maximum angular shaft misalignment : $\alpha = 1°$

maximum lateral shaft misalignment: $\Delta R = \tan \alpha \bullet L_x = L - (2 \bullet L_1) / \tan 1° = 0{,}0174$

calculation example: WDE 80 / L = 900 mm -> $\Delta R = \tan \alpha \bullet L_x$

with Lx = 900 - (2 • 40) = 820 mm; $\alpha = 1°$ $\Delta R = \tan 1° \bullet 820$ mm ≈ 14 mm



material:
bellows: stainless steel
hubs: high-tensile aluminum
intermediate pipe: aluminum
